

The background of the entire image features several modern, teardrop-shaped pendant lights. These lights have a clear, faceted glass body with a ribbed texture and a warm, glowing light source inside. They are suspended by thin, dark cords at various heights and positions, creating a sense of depth and movement. The overall aesthetic is clean and contemporary.

Stellar Dust Inspiration

Cosmic tapestry carrying light through space

The Stellar Dust lighting is composed of countless speckles that seem to float through space. This collection was originally designed for J&T bank in Prague by CMC architects, and designers Václav Mlynář and Jakub Pollág. Its success resulted in this design being adopted for regular production, as an addition to the BOMMA Constellations. Both optical illusions and the remarkable effects of these crystal components perfectly juxtapose modern interiors. The neutral clear color and universal round shape add to its versatility.
