

RECYCLED ALUMINUM.
A smart material.

emeco

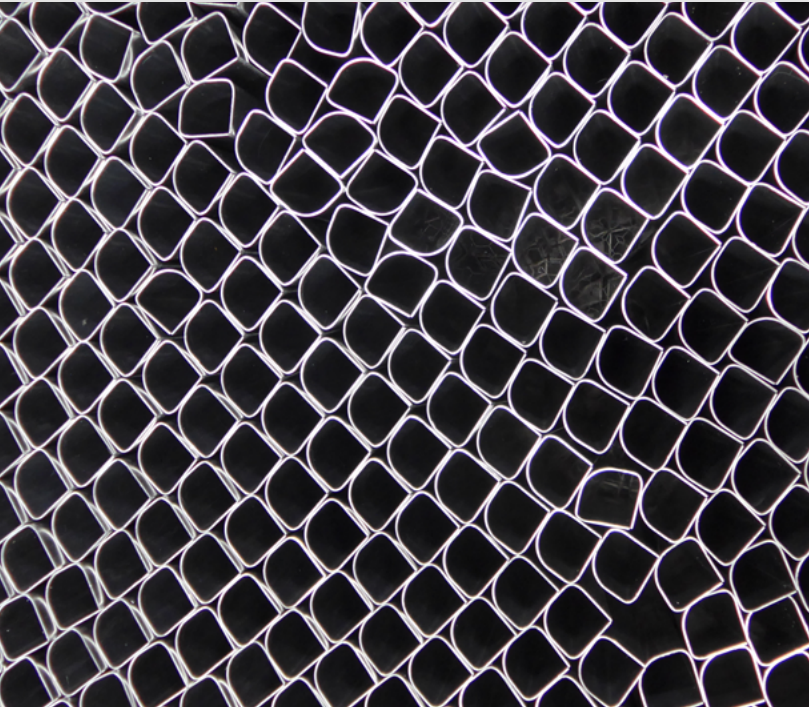

Handcrafted in Hanover,
Pennsylvania, since 1944.

We started out building chairs for US Navy ships during World War II. The Navy needed a chair that was light weight, non-corrosive, fire resistant, non-magnetic and torpedo proof. Emeco took on the challenge. Together with experts from Alcoa, we developed a unique 77-step process that turns scrap aluminum into chairs of extraordinary strength. Today, we still build them the same way, as approved by the US Navy in 1944.

Guaranteed for life.

Our all-aluminum chairs and stools come with a lifetime warranty. They have an estimated lifespan of 150 years or more. Their longevity, in both design and manufacture, means they can be passed down for generations.

Recycled and recyclable. Endlessly.

Most of the aluminum produced in the late 1800s is very much alive today. In cans, computer parts, golf clubs - and Emeco furniture. Recycling aluminum saves 95% of the energy required to make the same amount from its virgin source. We use a carefully selected alloy consisting of a combination of post-consumer and post-industrial recycled aluminum.

Low carbon footprint.

Recycled aluminum helps keep our products' carbon footprint exceptionally low, starting from only 8.42kg CO₂e. For context, the average chair typically has a footprint of 30-60kg CO₂e. Emeco's smart use of resources, in combination with the long life expectancy of our products, ensures our furniture sits as lightly as possible on the planet.

Outdoor approved.

Aluminum is non-corrosive. Perfect for outdoor use in any weather, even seaside. Aluminum does not heat up under the sun, it only becomes a little warmer, meaning you will not burn your hands or legs upon contact. We guarantee our hand brushed and anodized finish and our powder coated finishes for outdoor applications.

Easy to clean.

Aluminum is easy to maintain and keeps its appearance over time. Its non-bacterial properties make it well suited to sensitive settings such as healthcare environments. Our super strong anodized finish is bleach cleanable and can be power washed.

Lightweight.

Aluminum furniture is light weight, one of the many reasons it was originally selected for US Navy ships. It also makes for easier handling, for maintenance crews to pick up and clean under, and for furnishing and re-arranging of flexible settings. Many of our chair models are also stackable for efficient storage. For roof tops and other applications exposed to wind, we can add weight to the products without changing the look.

Timeless design.

Our products are built to stand the test of time - visually as well as physically. It's not about trends. It's about making things that last. Our goal is to build furniture that people want to keep for a long time. Emeco chairs looked great in 1944, they look great today and they'll continue to look great for decades to come.

Certified and declared.

Our aluminum products are BIFMA certified for commercial applications. HPDs provided for all models.

Aluminum does not emit VOCs in any measurable concentration and our products are certified Clean Air Gold.

Aluminum is naturally fireproof, enabling use in any application.

Classic finishes.

Recycled aluminum is Emeco's signature material, so we know our finishes. Hand brushed and hand polished finishes are expertly produced by our master craftsmen.

Hand brushed products are anodized, which provides an extremely durable all-weather finish. Polished chairs are hand polished 3 times. It takes 8 hours and produces a sparkling result.

Colorful finishes.

Most of our aluminum furniture is also offered in a range of powder coat colors. Select from our in-house colors, or choose your own. Durable and outdoor approved.

Perfectly framed combinations.

Recycled aluminum also forms the backbone of our assembled products, ensuring super strength where needed. Handcrafted aluminum frames are combined with seats in solid wood, recycled plastic or upholstery, in a range of expressions to fit any setting.
