

Vitruvius

mod. 2470

design by Eloisa Libera

Colors:

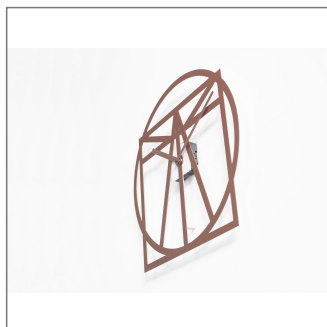

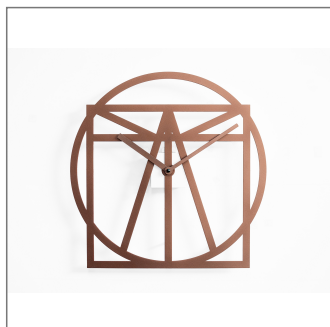

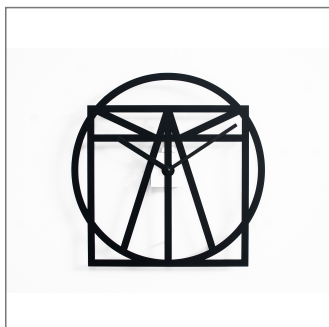

black

copper

Vitruvius, designed by Eloisa Libera, is inspired by Leonardo da Vinci's drawing of the Vitruvian Man, a study of the proportions of the human body based on his elaborations on Vitruvius's work, a well-known Roman writer and architect who lived in the first century before Christ. The design is characterized by simple lines that intersect each other. The movement of the hands, which are the same color as the quadrant, appear to bring to life the man placed at the center of the quadrant and the circle that surrounds it. Made of metal painted with non-toxic paints. Quartz movement high-quality German-made battery powered.
