emeco

We make furniture.  
In America.  
Often by hand.  
Mostly from recycled stuff.  
But always to last.

Do companies have goals beyond what they produce? We like to think so.

"Begin with what's left over. Turn it into what will last." That's the standard Emeco was founded on in 1944. Our first assignment was to turn scrap aluminum into lightweight, non-corrosive and extraordinarily strong chairs for US Navy battleships. It wasn't about trends. And it still isn't. Today, we still use that same unique 77-step craftsmanship process to build chairs by hand at our factory in Hanover, Pennsylvania. They turn out so strong we guarantee them for life. Making them that way is a way to pay respect to the product, its user, its maker and to the environment. Guided by our heritage, we'll keep exploring new solutions for turning waste materials into simple, useful and long-lasting furniture. With tomorrow in mind.
