Additional information

PET felt colour deviations may occur due to the use of recycled materials in PET felt production.

Undyed or differently coloured fibers may be visible on the product surface and are a natural characteristic of the material.

KITE acoustic ceiling screens cannot be fixed directly to Armstrong-type suspended ceilings due to their weight.

- Suspensions must be ordered separately. Please ensure that the correct type is selected when ordering.
- The product may experience a gradual height variation of ± 20 mm to ± 40 mm over time due to the natural properties of PET material, manufacturing tolerances, and changes in environmental conditions such as humidity and sunlight etc.

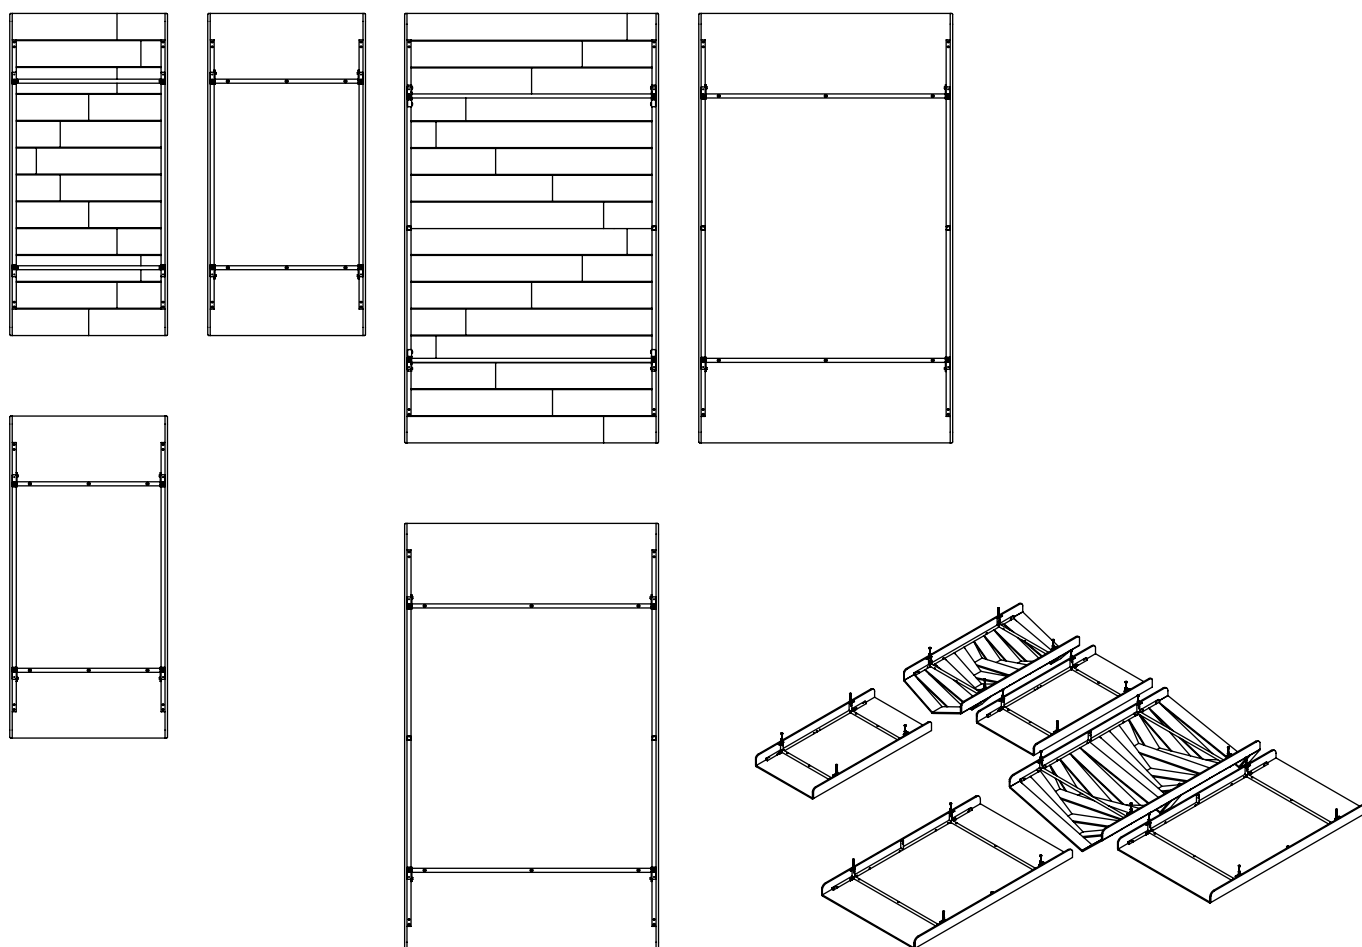

The acoustic ceiling screens can be installed in two ways:

- Hung separately
- Joined together

Metal fixations for joining panels must be ordered separately. For example, joining two panels requires one set of fixations (2 pcs.).

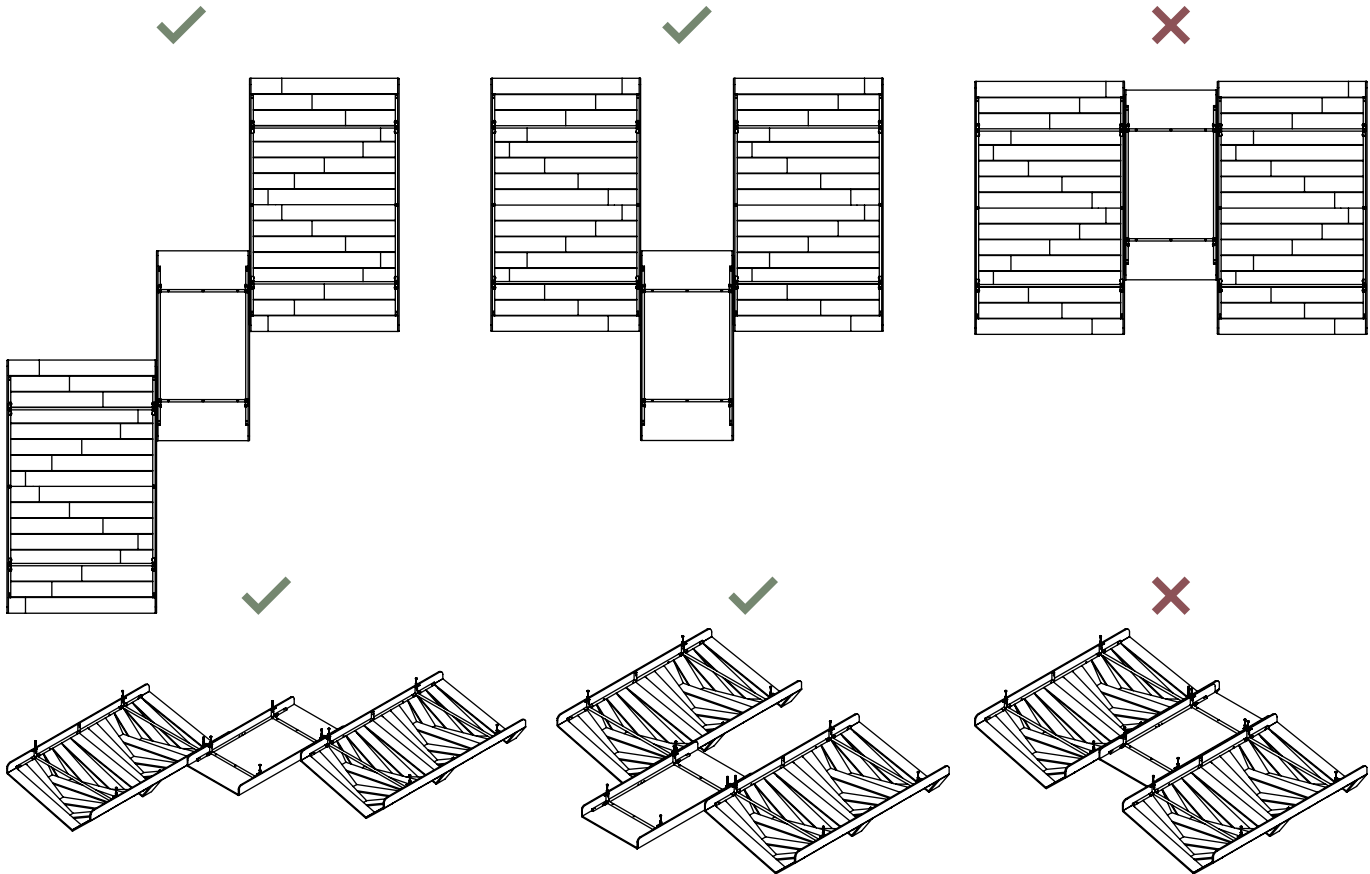

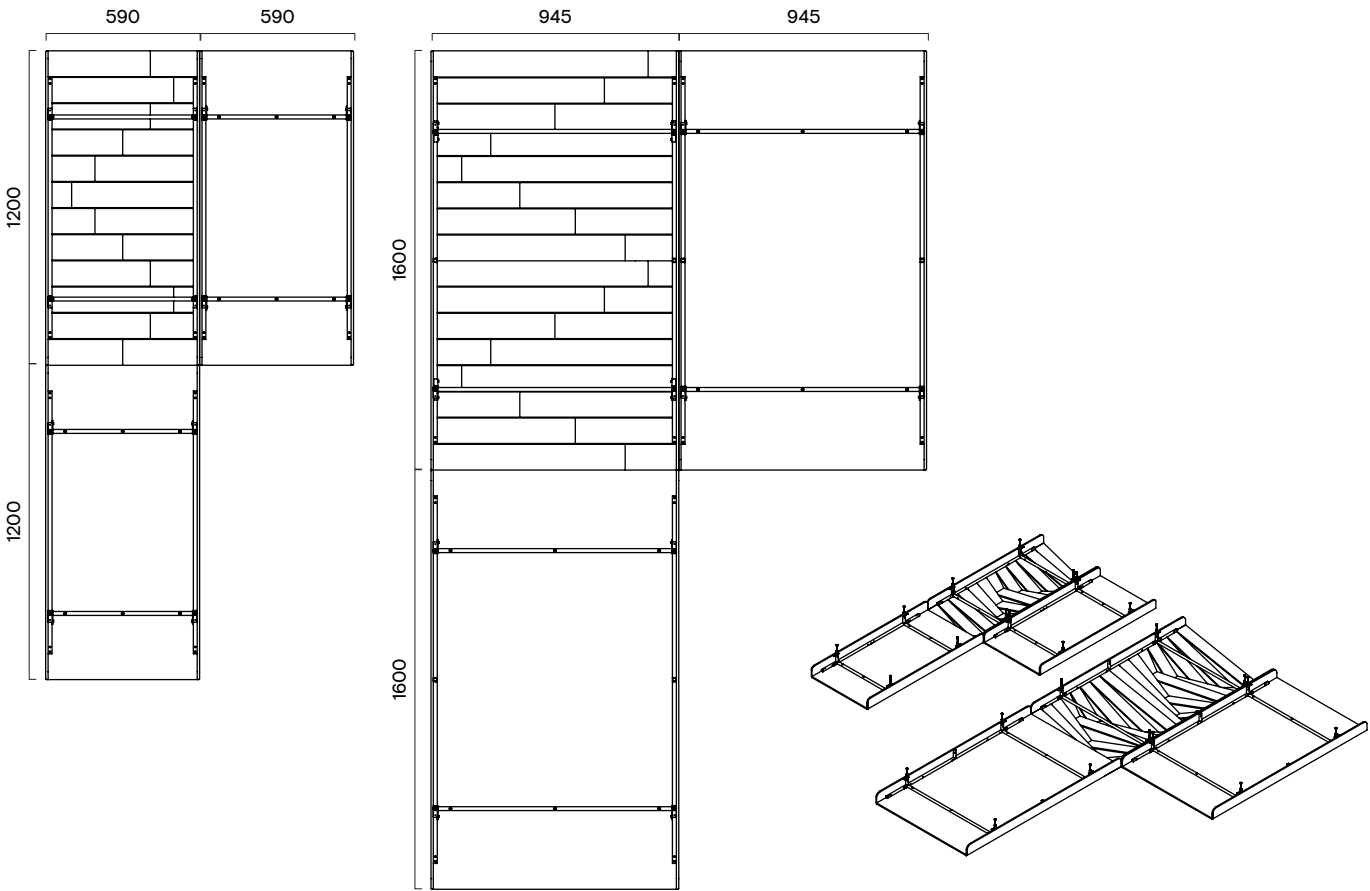

When joined, panels are connected along their short or long edges to cover larger areas without gaps.

Hung separately:

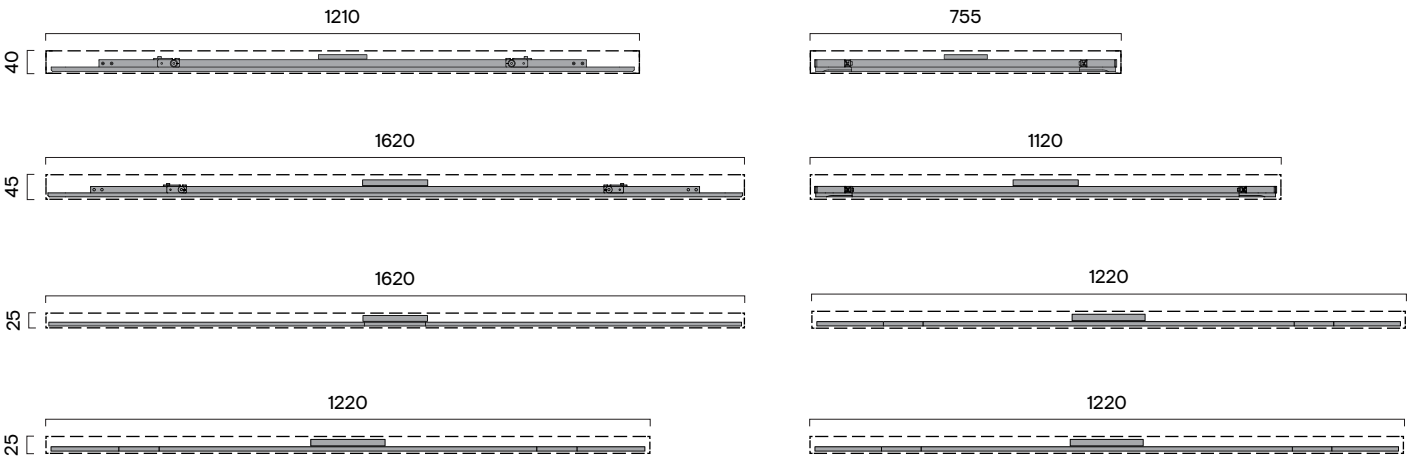

Joined together:

! Important: Only panels of the same size can be joined together.

Packaging:

- KITE Flat / KITE Oval / KITE Round: flat pack, fully assembled;

- KITE / KITE Chip: flat pack, semi assembled.
